In the appendix to his Universal Arithmetic, Newton approves of it highly for the construction of the roots of equations of the third and fourth order. For these purposes he prefers it to the means which the lines of the second order present. The intei ept of the superior conchoid between the vertex and the point of inflection is sometimes used in architecture as the figure of the shaft of the Corinthian column. The etymology of the name conchoid is from the Greek word nw 0S) a shell. Art. 412. Diocles, a Greek geometer, who lived in the fifth century after Christ, was the inventor of this curve. The occasion of its invention was the solution of the problem of the insertion of two mean proportionals. Pappus had previously shown that this problem might be solved by the following construction. Let the extremes-p Ac and Cb be placed at right angles, and with c as centre and the greater Ca as radius, describe a circle and join Db, and produce it to meet the circle at E, and produce Cb to meet the circle at F. Let a chord AG be inflected so that Hg shall be bisected by Cf, and ci will be the first of the two means. Thus the solution of the problem is made...
