Ethylcellulose-Stabilized Heat Resistant Chocolate

By Terri Stortz

LAP Lambert Academic Publishing Okt 2014, 2014.

Taschenbuch. Book Condition: Neu. 220x150x11 mm. This item is printed on demand - Print on Demand Neuware - Heat resistant chocolate was developed by adding ethylcellulose (EC) solubilized in ethanol to molten chocolate and thereafter evaporating the ethanol. The hardness of the chocolate was found to be dependent on the chocolate formulation and concentration of EC. Mechanical testing, molecular dynamics simulations, and Fourier-transform infrared spectroscopy revealed that hydrogen bonding between sucrose and EC were responsible for the formation of a network within the chocolate that provided mechanical strength at elevated temperatures. These methods also showed that lecithin, typically found at the surface of sucrose in chocolate, reduced heat resistance by impeding EC-sucrose interactions. However, fluorescence microscopy revealed that the ethanol used to prepare the chocolate could remove some of the lecithin from the sucrose. A solvent-free method of introducing EC to food systems was developed by producing thixotropic EC oleogels. Thixotropy was achieved by matching the Hansen hydrogen bonding solubility parameter of the oil phase to that of EC. These methods represent novel strategies to introduce EC as a functional ingredient to food systems. 184 pp. Englisch.

Reviews

A new e book with a brand new standpoint. I am quite late in start reading this one, but better then never. I discovered this ebook from my i and dad advised this publication to understand.

-- Jada Franecki II

Here is the very best book i have got read through until now. I could possibly comprehended everything using this composed e publication. You will not sense monotony at whenever you want of your time (that's what catalogues are for concerning should you ask me).
